

(20518)

Roll No.

B. Sc. (Micro.) -III Year

3514

B. Sc. (Micro.) (Hons.) Examination, May 2018

DIAGNOSTIC MICROBIOLOGY

(B-311)

Time : Three Hours [Maximum Marks : 50]

Note : Attempt any five questions. All questions carry equal marks.

1. What do you mean by infectious wastes ? Describe the various methods for the disposal of infectious wastes. 10
2. Discuss the traditional and automated antimicrobial susceptibility test methods. 10
3. What is serum ? Describe serological diagnosis of various infectious diseases. 10

(2)

4. Discuss the methods of particle agglutination and their clinical applications. 10
5. Write notes on the following : 5+5
 - (a) β -lactamase test
 - (b) Immunoassay.
6. Write a complete note on instrumentation and applications of PCR. 10
7. Which chromatographic procedures are adopted for the identification of microorganisms ? 10
8. Explain the methods for microscopic examination of infected materials i. e. (a) semisolids (b) mucoid materials (c) cytocentrifuge. 10
9. Describe presumptive identification of microbes with their suitable methods of procedures. 10
10. Discuss and differentiate between thin layer and paper chromatography. 10

B.Sc. (Micro) Examination, May-2024

DIAGNOSTIC MICROBIOLOGY

(B-311)

[B.Sc. (Micro.)]

Time : Three Hours]

[Maximum Marks : 50

Note : Attempt any **five** questions. **All** questions carry equal marks.

1. What are different types of biosafety level in a microbiology laboratory? Discuss any of two biosafety levels? 10
2. A new bacterial strain has isolated, how you can find its susceptibility to a particular antibiotic? 10

P.T.O.

3. Differentiate between traditional and automated antimicrobial susceptibility test? 10
4. To diagnosis of typhoid disease which biochemical reaction will be perform? Discuss its principal and method? 10
5. What is ELISA? Discuss about its principle and types? 10
6. What do you mean by agglutination assay? How it help to detect specific antigen in a sample? 10
7. What are the types of antimicrobial materials produced by different types of microbes? Write down some of their mechanism of action? 10
8. What is PCR? How it is used to detect specific bacteria from unknown sample?

9. How to examines microbes from nose, skin, mucus, and hair? Describe the detail about different types of colony morphology of bacteria? 10

10. What is presumptive test? What is its significance in case of clinical biochemistry? 10
